Requirement : patient has a diagnosis of radiculopathy (ICD-10: M54

Type : STRUCTURED

Result : SATISFIED

Policy Ev. : patient has a diagnosis of radiculopathy (ICD-10: M54; LCD L39054 -> ICD-10 covered: M54.16

Patient Ev. : Submitted ICD-10: M54.16

Explanation : The submitted diagnosis code(s) M54.16 are present in the LCD L39054 covered ICD-10 data. The diagnosis requirement is satisfied.

C2 [AGENTIC_QWEN] LCD-L39054-C6c7901

Requirement : The following diagnoses are non-covered under this LCD: routine general examination (Z00.00), encounters witho...

Type : SEMANTIC

Result : UNKNOWN

Policy Ev. : Required: confirmed_structural_diagnosis: Evidence that the patient has a confirmed structural diagnosis of spinal pathology, such as a specific spinal condition coded in the diagnosis (e.g., M54.16); Required:

clinical_indication_of_spinal_pathology: Clinical documentation indicating a clinical indication of spinal pathology, such as physician notes or imaging findings supporting a specific spinal condition

Patient Ev. : Patient presents with lumbar radiculopathy confirmed on Magnetic Resonance Imaging (MRI).

Explanation : =====

AGENTIC SEMANTIC EVALUATION

Criterion: The following diagnoses are non-covered under this LCD: routine general examination (Z00.00), encounters without clinical indication of spinal pathology. Injections performed solely for general pain without a confirmed structural diagnosis are not covered. Maximum of 3 injections per 6-month period unless clinical documentation supports additional treatment.

Policy: LCD L39054

Required Evidence:

- * confirmed_structural_diagnosis: Evidence that the patient has a confirmed structural diagnosis of spinal pathology, such as a specific spinal condition coded in the diagnosis (e.g., M54.16)

- * clinical_indication_of_spinal_pathology: Clinical documentation indicating a clinical indication of spinal pathology, such as physician notes or imaging findings supporting a specific spinal condition

- * number_of_injections_within_6_months: Documentation of the number of injections administered within the past six months to ensure it does not exceed three, unless supported by clinical documentation for additional injections

Patient Evidence:

- * Patient presents with lumbar radiculopathy confirmed on Magnetic Resonance Imaging (MRI).

Missing Evidence:

- * No documentation of the number of injections administered within the past six months

- * No documentation justifying additional injections beyond three within six months

- * Required evidence not found in request: 'Diagnoses: M54.16'

Qwen Result: UNKNOWN

Critic Result: VALIDATED

Final Result: UNKNOWN

Insufficient or inconclusive evidence to determine whether this semantic criterion is satisfied. The result is UNKNOWN. Deterministic rules and EvidenceFusion will determine final coverage.

(Agentic pipeline completed in 25320ms)

Type : SEMANTIC
Result : UNKNOWN
Policy Ev. : Required: diagnosis_with_structural_pathology: Evidence that the patient has a confirmed structural diagnosis of spinal pathology, such as degenerative disc disease, herniated disc, or spinal stenosis; Required: injection_frequency_justification: Clinical documentation supporting the need for more than three injections within a 6-month period
Explanation : =====
AGENTIC SEMANTIC EVALUATION

Criterion: The following diagnoses are non-covered under this LCD: routine general examination (Z00.00), encounters without clinical indication of spinal pathology. Injections performed solely for general pain without a confirmed structural diagnosis are not covered. Maximum of 3 injections per 6-month period unless clinical documentation supports additional treatment.
Policy: LCD L39054

Required Evidence:

- * diagnosis_with_structural_pathology: Evidence that the patient has a confirmed structural diagnosis of spinal pathology, such as degenerative disc disease, herniated disc, or spinal stenosis
- * injection_frequency_justification: Clinical documentation supporting the need for more than three injections within a 6-month period

Patient Evidence:

- * (No supporting evidence found in request)

Missing Evidence:

- * No confirmed structural diagnosis of spinal pathology is stated; the patient data explicitly states 'No structural pathology identified.'

This fails to meet the requirement for [diagnosis_with_structural_pathology].

- * No clinical documentation supporting the need for more than three injections within a 6-month period is provided; therefore, [injection_frequency_justification] is missing.

Qwen Result: NOT_SATISFIED

Policy: NCD N123

Required Evidence:
* diagnosis_of_chronic_pain: Documentation of a diagnosis of chronic pain consistent with ICD-10 code G89.29 or equivalent
* inadequacy_or_contraindication_of_pharmacological_treatment: Documentation that conventional pharmacological treatment has been inadequate or contraindicated for the patient's chronic pain

Patient Evidence:
* Patient presents with chronic pain syndrome following lumbar surgery.
* Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.
* Transcutaneous Electrical Nerve Stimulation (TENS) (transcutaneous electrical nerve stimulation) requested as adjunct pain management.

Missing Evidence:
* Documentation of a diagnosis of chronic pain consistent with ICD-10 code G89.29 or equivalent is not explicitly stated in the patient data, though the diagnosis is listed in additional structured facts. The policy requires explicit documentation in the patient data, and this is not provided as a quoted statement.

Qwen Result: UNKNOWN
Critic Result: VALIDATED
Final Result: UNKNOWN

Insufficient or inconclusive evidence to determine whether this semantic criterion is satisfied. The result is UNKNOWN. Deterministic rules and EvidenceFusion will determine final coverage.

Requirement : patient has a diagnosis of chronic pain requiring neurostimulation therapy and that conventional pharmacologic...
Type : SEMANTIC
Result : SATISFIED
Policy Ev. : Required: diagnosis: Patient must have a diagnosis of chronic pain as defined by the ICD-10 code G89.29; Required: treatment_response: Conventional pharmacological treatment must have been inadequate or contraindicated for the patient's chronic pain
Patient Ev. : Patient presents with chronic pain syndrome following lumbar surgery.; Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.; Transcutaneous Electrical Nerve Stimulation (TENS) (transcutaneous electrical nerve stimulation) requested as adjunct pain management.
Explanation : =====
AGENTIC SEMANTIC EVALUATION

Criterion: patient has a diagnosis of chronic pain requiring neurostimulation therapy and that conventional pharmacological treatment has been inadequate or contraindicated
Policy: NCD N123

Required Evidence:

- * diagnosis: Patient must have a diagnosis of chronic pain as defined by the ICD-10 code G89.29
- * treatment_response: Conventional pharmacological treatment must have been inadequate or contraindicated for the patient's chronic pain

Patient Evidence:

- * Patient presents with chronic pain syndrome following lumbar surgery.
- * Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.
- * Transcutaneous Electrical Nerve Stimulation (TENS) (transcutaneous electrical nerve stimulation) requested as adjunct pain management.

Missing Evidence:

- * The patient data does not explicitly state that the chronic pain diagnosis is defined by ICD-10 code G89.29 in the context of requiring neurostimulation therapy.

Qwen Result: SATISFIED
Critic Result: VALIDATED
Final Result: SATISFIED

The submitted clinical documentation satisfies this semantic policy criterion. The agentic evaluation chain VALIDATED the result.

C4 [AGENTIC_QWEN] NCD-N123-C53a384

Requirement : is covered for acute post-operative pain and chronic intractable pain when conservative therapy has been tried...

Type : SEMANTIC

Result : UNKNOWN

Policy Ev. : Required: pain_type: Patient must have either acute post-operative pain or chronic intractable pain; Required: conservative_therapy_attempted: Documented evidence that conservative therapy was tried

Patient Ev. : Patient presents with chronic pain syndrome following lumbar surgery.; Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.; Transcutaneous Electrical Nerve Stimulation (TENS) (transcutaneous electrical nerve stimulation) requested as adjunct pain management.

Explanation : =====

AGENTIC SEMANTIC EVALUATION

Criterion: is covered for acute post-operative pain and chronic intractable pain when conservative therapy has been tried and failed

Policy: NCD N123

Required Evidence:

- * pain_type: Patient must have either acute post-operative pain or chronic intractable pain
- * conservative_therapy_attempted: Documented evidence that conservative therapy was tried
- * conservative_therapy_failure: Evidence that conservative therapy failed to provide adequate pain relief

Patient Evidence:

- * Patient presents with chronic pain syndrome following lumbar surgery.

- * Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.
- * Transcutaneous Electrical Nerve Stimulation (TENS) (transcutaneous electrical nerve stimulation) requested as adjunct pain management.

Missing Evidence:

- * The patient data does not explicitly state whether the pain is acute post-operative pain or chronic intractable pain, though chronic pain syndrome is mentioned. The policy requires either acute post-operative pain or chronic intractable pain, and this distinction is not clearly established.
- * The patient data does not explicitly state that conservative therapy failed to provide adequate pain relief, only that pharmacological therapy has been tried for over 6 weeks without satisfactory relief. 'Satisfactory relief' is not equivalent to 'failed to provide adequate pain relief' as per the policy requirement. This distinction is not explicitly made.

Qwen Result: UNKNOWN
Critic Result: VALIDATED
Final Result: UNKNOWN

Insufficient or inconclusive evidence to determine whether this semantic criterion is satisfied. The result is UNKNOWN. Deterministic rules and EvidenceFusion will determine final coverage.

(Agentic pipeline completed in 27077ms)

[CRITIC_AGENT] COMPLETED: Critic VALIDATED Qwen's result: UNKNOWN. All 6 checks passed.

C5 [AGENTIC_QWEN] NCD-N123-C5e192e
Requirement : must have failed conservative therapy for >= 6 weeks
Type : SEMANTIC
Result : UNKNOWN
Policy Ev. : Required: conservative_therapy_duration: Documentation showing the patient has undergone conservative therapy for at least 6 weeks and has failed to improve
Patient Ev. : Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.
Explanation : =====

AGENTIC SEMANTIC EVALUATION

Criterion: must have failed conservative therapy for >= 6 weeks
Policy: NCD N123

Required Evidence:

- * conservative_therapy_duration: Documentation showing the patient has undergone conservative therapy for at least 6 weeks and has failed to improve

Patient Evidence:

- * Conservative pharmacological therapy has been tried for over 6 weeks without satisfactory relief.

Missing Evidence:

- * The patient data does not specify the type of conservative therapy that was attempted or whether the therapy was discontinued or modified during the 6-week period. The policy requires documentation of failure to improve after conservative therapy, but the data does not explicitly state the nature of the therapy or the specific failure to improve.

Qwen Result: UNKNOWN
Critic Result: VALIDATED
Final Result: UNKNOWN

Insufficient or inconclusive evidence to determine whether this semantic criterion is satisfied. The result is UNKNOWN. Deterministic rules and EvidenceFusion will determine final coverage.
